PROFILE

Creative and goal-oriented web developer with strong skills in HTML, CSS, JavaScript, React, and Vite, as well as experience working with APIs. I am passionate about developing modern, responsive, and user-friendly websites where functionality meets clean and attractive design. I have formal education in web design and continuously work on strengthening my front-end and coding skills.

In addition to development, I also have experience in graphic design and digital tools such as Adobe Photoshop, Illustrator, and Adobe XD, including logo design, visual identity, and image editing. This allows me to combine technical development with a creative and visual perspective. I am also interested in UX design and open to opportunities where I can learn and grow within user experience and design development.

PERSONALITY

I moved to Denmark in 2018 and since then I have learned the language and completed VUC to qualify for an IT education. As a mother of two, I have developed strong organizational skills, motivation, and perseverance qualities that I bring into my work. I understand Danish at an intermediate level and speak it at a basic level. I am friendly, helpful, and have a positive "can-do" attitude, which enables me to collaborate well and learn quickly.
